

## Background

- 64 year old lady.
- June 22 - surgery for malignant mass in transverse colon.
- Extended right hemi-colectomy, partial resection of the greater gastric curvature and formation of double-barrelled stoma.

## Problems Experienced

- Stoma is flush to the skin level and close to the incisional wound and umbilical area.
- Irritant dermatitis experienced from initial pouching system.

## Nurse Advice

July 22 - Suggestion to use eakin **dot**<sup>®</sup> 2-piece soft convex 80mm and eakin **freeseal**<sup>®</sup> to create a secure seal around the stoma.

**eakin**<sup>®</sup> products were chosen for their skin friendly properties.

### Solution with eakin freeseal<sup>®</sup>

**Skin:** There has been clear improvement in the peristomal skin condition and skin has completely healed by early August 2022.

Before

4th July 2022

7th July 2022

8th August 2022

This is an individual case study and therefore claims made are the experience of the nurse and have not been further validated by **eakin**<sup>®</sup>.
